Hi Rob,

Well, I don't like hotlinking to ac.exe on my server because I often got lots of support emails and the answer was already published on the download page. That's the main reason I disabled hotlinking.

You can include ac.exe directly in your distribution package, no problem with this. The advantage of using a download script is that you always will get the latest release as the source on my server is always ac.exe.

It's up to you to choose the best option :-)

Best regards,
Romain

Hi Romain,

Thanks for that quick response! And thanks for allowing me to include it in the pkg. :)

Is there a statement of distribution rights, license or eula text that I could link to?

Hi Rob,

You're welcome.

The Eula is displayed in the installer during installation.

Best regards,
Romain
